(54) Title: HOLDER FOR A DATA CARRIER

(57) Abstract: The invention includes at least one bottom side and a topside, with a insert-space in between, also including sides, which connecting the topside with the bottom side. Such a holder is general known and is being used to put away, for example a disc-shape data carrier, like a CD or a DVA, as also for magnetic data carriers, like a tape. The holder can be held by a user and he can use the nearby the hinge axis placed button, so the cover part of the holder part will be released. When the holder is placed on a horizontal supporting surface, the data carrier will be slanting placed in to the holder. Application of clip means for the data carrier is not necessary.
